 615.983.4519 fx

Our project managers headed into hard hit Louisiana & Texas to assist our client, C.B. Richard Ellis, with property management of Regions Banks that were affected by Hurricanes Gustav and Ike. By using the base camps set up by CB Richard Ellis with temporary services (gasoline, electricity, and housing), we were able to conduct business in areas where basic necessities were not readily available.

Damaged shingle roof
 Baton Rouge, LA

Sunrise at Base Camp
 Tomball, TX

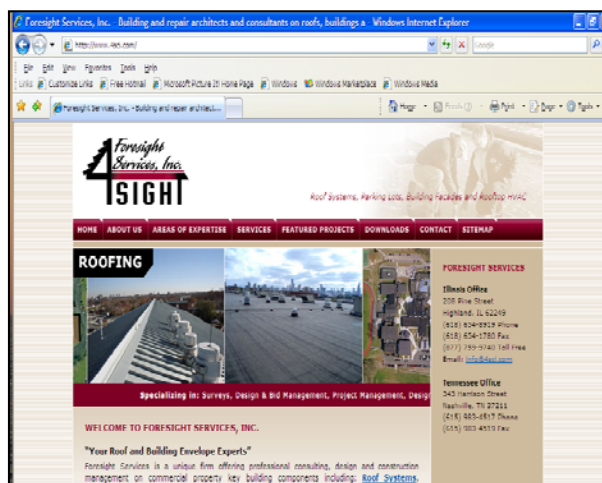

Blown off flat roof
 Thibodeaux, LA

Since 1999 - celebrating 10 years
of service in 2009. Thanks to all
our clients and contractors. It's
been a great decade!

Industry Outlook ...

The world is always changing - this is also true in how we maintain our buildings. We use terms today such as:

- Energy Star
- Energy Efficient
- Environmentally Friendly
- Green
- Alternative Energy
- LEED

ROOFING - The trend is going toward energy savings with requests for added insulation and reflective membranes. There is a lot of chatter about Green Roofs, at present we are involved in two Green Roof projects in the construction stage. We have received lots of inquiries from clients about installing green roofs.

FAÇADE - We are getting numerous requests to make upgrades for energy efficiency, which can be accomplished by adding insulation in walls, but mostly by installing energy saving frames, windows, and store fronts. At present we have several jobs in the design phase and under construction utilizing these components.

PARKING LOTS - We have seen old asphalt being removed and recycled or used as base material, rather than disposed of in a landfill.

With the new administration in tact in Washington, the stimulus package will be a hot item. We look for those funds to be awarded to projects that are Green and promote energy conservation. Call Foresight with any questions you may have on how to make your next project Green.
